# The Help Center and Agency Customization

---

The articles in the Help Center and videos in the Learning Library are based on the default setup of ChildPlus and assume full security access to all platforms, modules, features and fields. If you cannot find or access a feature referenced in an article, be aware that your agency's specific customization of ChildPlus determines:

- Your access to each platform
- Your access to specific modules or features
- Security or location restrictions for your level of access to ChildPlus
- Whether a module or feature has been turned on
- Which fields are available in each module
- The content of drop-down fields

Contact your ChildPlus administrator to verify your security access and the availability of a feature referenced in an article.

If you are a ChildPlus administrator and need to configure security access or turn on a feature, see [User Security Groups](#) or [contact us](#) for additional assistance.

## Help Center Updates and ChildPlus Platforms

The Help Center is continually updated to reflect the current version of ChildPlus. Ensure that you are using the [latest version of ChildPlus](#) and referencing an article for the appropriate ChildPlus platform. Instructions for modules often differ between ChildPlus Online and ChildPlus Desktop and are unique for the Attendance App.

- To find out which version of ChildPlus you are using, see [About ChildPlus](#).
- For more information about the different platforms and how to access them, see [Platform Comparison](#).
- To learn about the differences between the modules in ChildPlus Desktop and ChildPlus Online, see [Module Comparison](#).
